# MH Format Strings (cont'd)

Simple format string to build a reply message header:

```
To: %<{reply-to}%{reply-to}%|%{from}%>\n\
%<{subject}Subject: %{subject}%>
```

That says:

- Output `To:` followed by the *Reply-to:* address from original message, if any. Else output the original *From:* address.

- If original message had a *Subject:*, print `Subject:` followed by that subject.
