Program Example:
Parsing Message Headers

Part of a shell script with folder name in `$f` and message numbers in `$m`:

```
scan +$f $m \
   -format "%(msg) %(addr{from}) %{subject}" |
while read mnum from subj
do
    # Process this message with its
    # $mnum, $from, and $subj
    ...
done
```
