Your Own Interface to MH

(Example: A Graphical Interface — 1 of 2)

The flexibility of MH lets you “hide,” simplify, or enhance the MH command-line interface with your own interface.

- For message summary:
  1. run *scan* (with a format file?),
  2. put *scan* output in window with scroll bar,
  3. grab message number from start of selected line.

- To send mail:
  1. build draft file with your WYSIWYG editor,
  2. use *send* comand to make folder copy and deliver
  3. If error output from *send*, parse (check *send.c* source code for possible errors) and prompt user
