MH Command-line Options/Switches

Change behavior of each MH command

Usual syntax: `-`*`optname`* or `-no`*`optname`*

Examples:

- `repl -query` asks "Reply to *this-address*?" `...`
- `repl -noquery` (or just `repl`) uses all addresses

Can set your default in MH profile file:

```
repl: -query -nocc me
```

To override MH profile, use switch on command line:

% **repl -noquery**
